Dr. Dana F. Flavin
Medical Director
Rowayton, CT

Bruno Lacroix
12, Rue Pernelle
75004 Paris

Dear Bruno,

I was very impressed at your tremendous knowledge in the area of oxidation, reduction in cells and how we can reverse diseases by knowing this valuable information. Your presentation was fascinating and it is rare for me to meet a colleague who has so much valuable information to help patients.

We at CollMed have been researching many diseases as well as cancer for many years and what we have learned has saved many lives already, just as your extensive knowledge is helping patients. It is so important to share information as we can never learn enough to stop suffering and save lives.

We are testing new methods for cancer reversal including radiofrequency combined with immunotherapy. The successes have been astounding. In addition, we are developing a new cancer drug, that will only be directed to the tumors and not damage any other cells or organs. Your work fits exactly in this scheme, so we shall be very interested to continue our collaboration.

I look forward to speaking with you again, and recommend you very highly for your extensive knowledge in patient care, and advice to colleagues for their patients.

My best regards,

Dr. Dana F. Flavin

To whom it may concern,

The obstacle course Lyme disease patients experience in dealing with their disease is very difficult and painful. The nodal point for them is to meet a therapist who is aware of the extreme complexity of this pathology. Their therapist must be trained not only to understand the limits of available serological testing but also in the recognition of clinical symptoms. Following this come therapeutic strategies. These strategies can only be effective in the long term if the patient's background and medical history are taken into account.

To manage a treatment and possible cure of the patient, the therapist must be a very knowledgeable in both physiology and clinical medicine. These last two points are frequently not considered, because of a lack of training or of being little known.

Mr Bruno LACROIX is undoubtedly an expert in this area of knowledge. Thanks to him, to the countless discussions about these topics, I myself now have a much better strategy and understanding for treating my own chronic Lyme disease, but I am also able to help others dealing with the disease whom our Organization supports. Bruno LACROIX is the only person I know who has been able to cure a tick-borne disease (Lyme and co-infections) patient without chemical drugs: this is the point where medical doctors fail because of not taking into account physiology when trying to heal their patients.

The topics presented during the many seminars held by Mr Bruno LACROIX, both in France and abroad, are a revelation to countless doctors. As a tireless researcher and worker, he is certainly one of the few people in France to have such a high level of knowledge, particularly in the areas of physiology and functional medicine. His knowledge should be made available to benefit all therapists, for the good of their patients.

As a co-worker with very popular, international medical professors or doctors in France and abroad, such as Pr Christian PERRRONNE at the French High Council of Public Health, or the American Doctor Richard HOROWITZ (international tick-borne disease specialist) among others, I am honored to have received their confidence and to collaborate with them on blood test and treatment research. I am currently in charge of applying for grants and trying to arrange financial support for a new research project on a blood test, called "DIMITRI".

From my work as a volunteer for 3 years with these Professors and Doctors I can see that the direction they are currently taking to heal patients less and less involves using chemical drugs less and less and considering natural tools and physiology more and more in their comprehensive approach to patients.

Sincerely yours,

Judith Albertat, President of Lyme Sans Frontières

ATTESTATION

Zeist, 24th September, 2014

I, Paul Musarella M.D., declare that I have been by many lectures of Mr. Bruno Lacroix and I am impressed from his enormous scientific knowledge in different fields such as Anti-Aging medicine, functional medicine, nutrition and sport physiology.

He is an excellent speaker and his lectures are from a high scientific level. It is always a pleasure to go back to his presentations.

Sincerely true

P. Musarella M.D.

To whom it may concern

Reference - Mr Bruno Lacroix

I specialise in maximising human performance using biomechanics. I have worked in the field of tennis coaching at the highest levels including the top ten in the world. I have also worked in other sporting and business areas.

Throughout the last 30 years, I have used experts from around the world to assist me in my business including leading nutritionists.

Put simply, Bruno Lacroix is the best biochemist and fitness adviser I have known.

I have only ever given a ranking of 10/10 in a reference once in 30 years. From my experience to date, I would give Bruno Lacroix 10/10 for his expertise in the field of maximising human health and performance.

Bruno is highly knowledgeable about nutrition and fitness. One of his best characteristics is his determination to justify his treatments to the client.

Bruno is totally committed to his field of expertise.

Bruno Lacroix has been assisting me in the preparation of a young professional tennis player who had been suffering from glandular fever for a long time. Using Bruno's recommended supplements the young player has made a strong and rapid recovery.

Bruno is prompt, punctual, well mannered, well presented and well liked.

Bruno is extremely patient and pleasant with his clients.

Bruno was strongly recommended to me by a specialist trainer here in Monaco.

Yours sincerely

To Who It May Concern,

This is a letter of recommendation for Mr. Bruno LaCroix, a person of solid character and superior reasoning. In the several years that I have known Bruno, he has shown a constant inquisitive nature about things related to longevity and health and has demonstrated that he is capable of accurate scientific analysis, while still being able to be creative and innovative in these areas.

He has a solid grasp of the dynamics of brain chemistry, and he is expert in his understanding of nutrition, and exercise training related to physical culture and longevity. He also never rests on his laurels but is constantly investigating new areas of research. When he comes to visit me in Los Angeles our hours long conversations make it seem like the world of health is our "university".

For whatever position Bruno is being considered, I recommend him. He will always prove to be diligent and resourceful. He has my deepest respect, and my friendship.

Sincerely,

Michael Mooney
